

# Redhat Linux System Administration

## Course Description

Linux, being an open source free operating system, is the preferred choice of high percentage of small to large scale organizations for hosting their core business applications on backend enterprise servers. It's a highly stable, secure and scalable platform. Predominantly, servers at majority of service providers are powered by Linux for offering cloud, web/mail hosting or virtualization services. Hence, it's one of the most demanding skills in the corporate world.

This course has been designed for IT systems administrators and system support individuals that require a more than mere beginner understanding of Linux. Full course builds knowledge and capability of maintaining and troubleshooting the advanced features and functionality in Red Hat Linux.

## About The Company:
